

**LOOKING FOR MORE THAN A JOB?**

**JOIN US!**

## **INTEGRATION ENGINEER (M/F/D)**

The Integration Engineer's role is to support the planning, coordination and integration of cloud platforms, applications and data flows through development of interfaces related to cloud platforms, software programmes, applications and third-party solutions.

This is a hands-on role and you will be responsible for developing and maintaining a platform and application solution architecture blueprint for the bank, including the definition of master data sources in collaboration with the data management team. The role also oversees the testing of the interoperability of platforms and application modules under development by our in-house software development teams, as well as commercial off-the-shelf software deployed in-house and with external third parties.

The Integration Engineer reports to the Head of IT Services (Application Support & Automation Integration).

### **ABOUT THE JOB** | What will you do?

As an Integration Engineer, you will be responsible for the following activities:

- Develop and maintain an integration architecture blueprint for the bank
- Support the integration of new applications into existing systems and software throughout the company
- Support the usage of new application integration technology into the existing Platform and Application Integration environment
- Define integration strategies and methods to facilitate and support projects deadlines
- Ensure that integration projects support business requirements and goals, fulfil end-user requirements, and identify and resolve systems issues
- Develop standards and processes to support and facilitate integration projects and initiatives, but also simplify the topology where possible
- Support the application-related risk management as part of the overall risk framework
- Record, track and report integration performance and software quality metrics

# WORKING FOR ADVANZIA

## THE UNCONVENTIONAL BANK

---

### **ABOUT YOU** | What's your background?

---

- University degree, preferably in computer science information systems or related field, or equivalent combination of education and experience in a similar position
- Five or more years of IT and business/industry work experience including data/platform architecture design and deployment, systems lifecycle management, and implementation of the above
- Experience in maintaining an application capability landscape
- Experience in aligning application capabilities with business needs
- Ability to apply architectural principles to business solutions
- Ability to assimilate and correlate disconnected documentation and blueprints
- Experience modelling application processes using a variety of tools and techniques
- Agile mindset focused on continuous improvement
- Capacity to work with minimal guidance in complex projects
- Different programming languages (API, XML, MS SQL knowledge) and hands-on experience

### **WHAT WE EXPECT** | What are your skills?
